1.
   my name is wajeeha chaudhary roll no : 26i3304 i ma a BS software engineering student. I created a simple restaurant website named Desi Vibe Dhaba in Lab 11 using HTML and CSS. In Lab 12, I am expanding it into a multi-page website using AI assistance.

the website uses a beige background brown and dark red colours, and a monospace font.

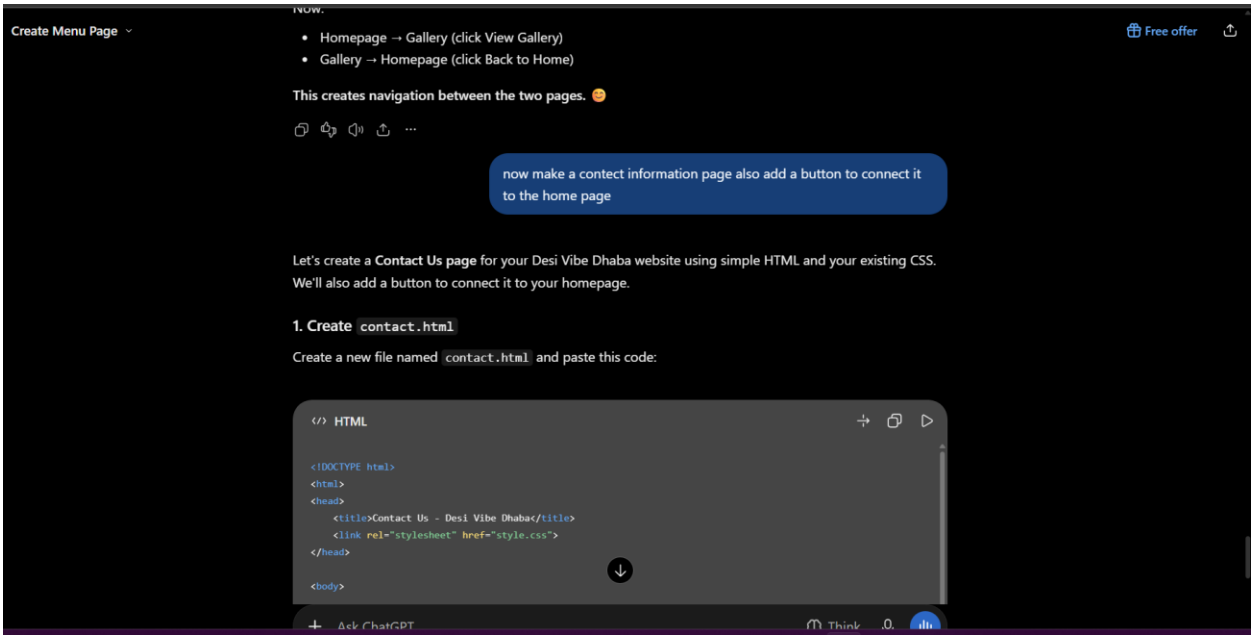

now i have to make different web pages . this my my code for both the files . now make a page of menu for me.

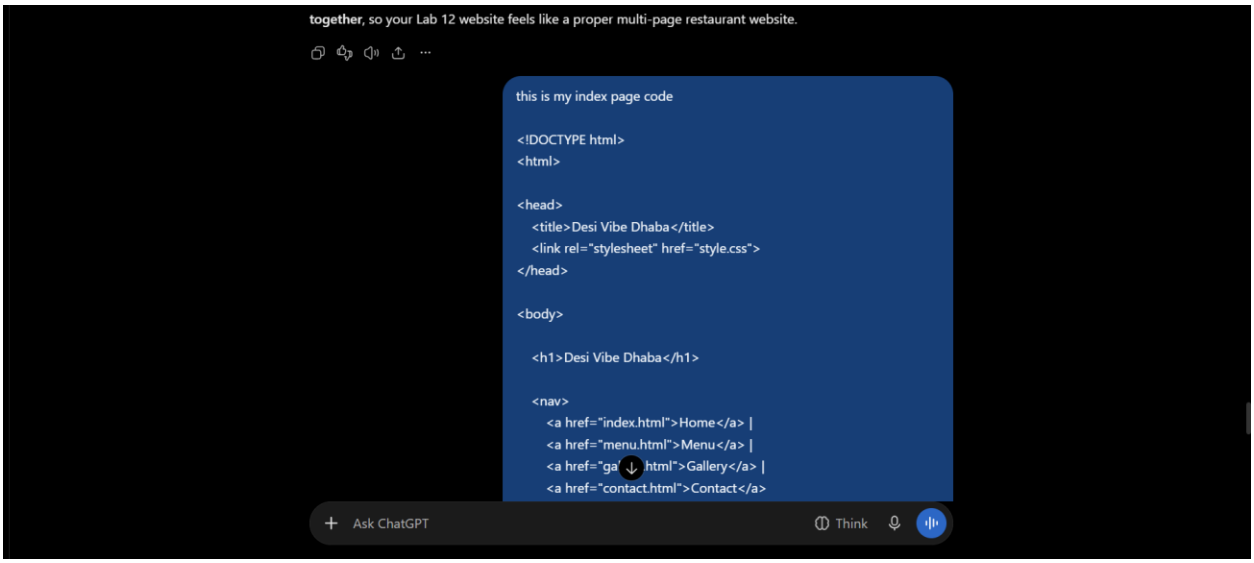

2. help me make the gallery page i only want to add maximum two to three pictures
3.will this code connect my gallery page to the home?

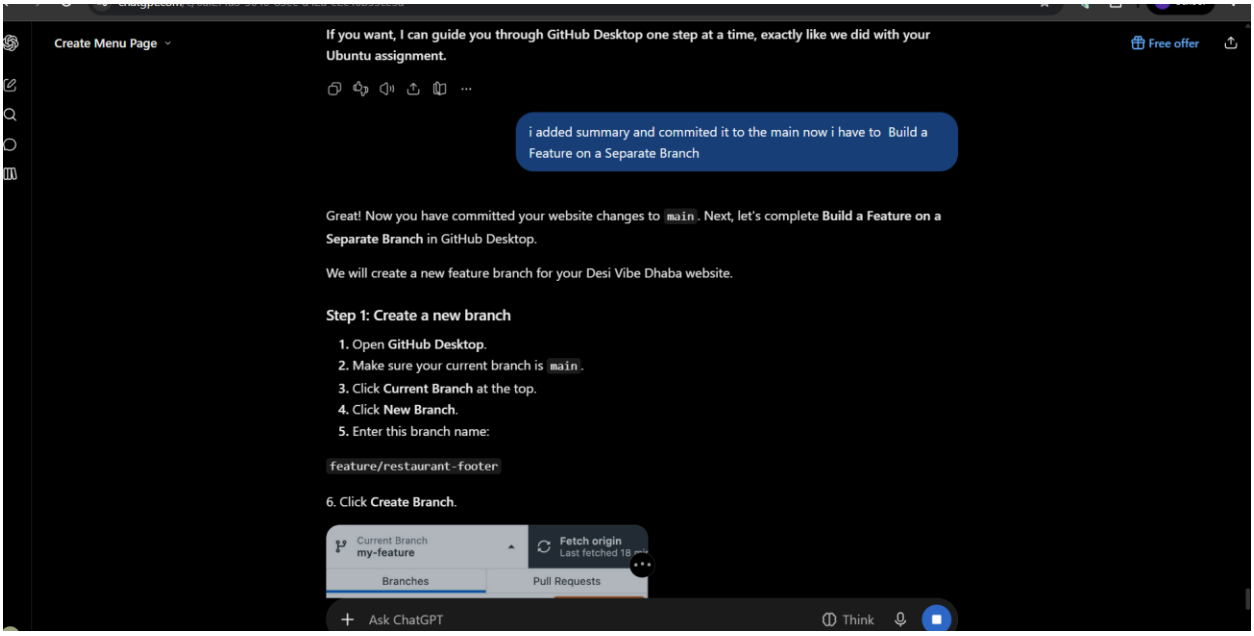

4. now make a contect information page also add a button to connect it to the home page

5. I gave my code of index.html to the ai , it helped me correct the connection between the menu na dhome page.

together, so your Lab 12 website feels like a proper multi-page restaurant website.
this is my index page code
<!DOCTYPE html>
<html>
<head>
<title>Desi Vibe Dhaba</title>
<link rel="stylesheet" href="style.css">
</head>
<body>
<h1>Desi Vibe Dhaba</h1>
<nav>
Home |
Menu |
<a href="ga
html">Gallery |

i added summary and commited it to the main now i have to Build a Feature on a Separate Branch
Great! Now you have committed your website changes to main. Next, let's complete Build a Feature on a Separate Branch in GitHub Desktop.
We will create a new feature branch for your Desi Vibe Dhaba website.
Step 1: Create a new branch
1. Open GitHub Desktop.
2. Make sure your current branch is main.
3. Click Current Branch at the top.
4. Click New Branch.
5. Enter this branch name:
feature/restaurant-footer
6. Click Create Branch.
